bend and deflect earthward. Ultraviolet radiation from the sun causes the outer atmosphere to become ionized. Relatively dense areas of ionization take place, and these are called layers. They lie parallel to the earth's surface and occur at well-defined distances of 25 to 200 miles. Some radio waves penetrate an ionized layer deeply and then bend back toward earth. Others penetrate the layer ...

A non-directional (radio) beacon (NDB) is a radio transmitter at a known location, used as an aviation or marine navigational aid. As the name implies, the signal transmitted does not include inherent directional information, in contrast to other navigational aids such as low frequency radio range, VHF omnidirectional range (VOR) and TACAN.NDB signals follow the curvature of the Earth, so they ...

What is dark energy? More is unknown than is known — we know how much there is, and we know some of its properties; other than that, dark energy is a mystery — but an important one. Roughly 70% of the Universe is made of dark energy. Dark matter makes up about 25%. The rest - everything on Earth, everything ever observed with all of our instruments, all normal matter adds up to less than 5 ...
