Introduction to Calculus (Differential and Integral Calculus)

needs algebra but not calculus: if v is constant and f starts at zero then $f = vt$. The opposite is also true. When f increases linearly, v is constant. The division by time gives the slope. The distance is $fl = 120$ miles when the time is $t_1 = 2$ hours. Later $f' = 240$ at $t = 4$. At both points, the ratio f/t is 60 miles/hour. Geometrically,

Algebra is just like a puzzle where we start with something like " $x - 2 = 4$ " and we want to end up with something like " $x = 6$ ". But instead of saying "obviously $x=6$ ", use this neat step-by-step approach: Work out what to remove to get " $x = \dots$ " Remove it by doing the opposite (adding is the opposite of subtracting) Do that to both sides

Introductory Calculus - 2nd Edition

An introduction to the Calculus, with an excellent balance between theory and technique. Integration is treated before differentiation--this is a departure from most modern texts, but it is historically correct, and it is the best way to establish the true connection between the integral and the derivative. Proofs of all the important theorems ...
