Increased workflow productivity In an increasingly volatile industry climate productivity is key. The Petrel platform supports automated, repeatable workflows, to capture best practices and share them across the organization. New data is easily incorporated, keeping the subsurface live and current.

To take full advantage of the uncertainty handling in Petrel, you need to have an understanding of the Workflow editor, which is the building block of the Uncertainty and optimization process. Day two will focus on understanding sensitivities and uncertainties of a Base case volumetric reservoir model. Structural uncertainties related to surfaces and velocities will be explored, as well as stochastic parameters related to Fluid contacts, facies and petrophysical uncertainties.
