In computational offloading, mobile devices offload their computationally intensive tasks to the central cloud data centers. The mobile devices face a major challenge while contending for computational offloading. The time and resources saved by mobile devices is sometimes offset by latency involved in discovering appropriate cloud server and migrate the workload. Several real-time mobile ...

Artificial intelligence's underlying processes, on the other hand, typically bear no resemblance to the mechanisms used by the human brain. Rather than attempt to develop computational models that help us understand human intelligence, the AI designer's goal is to produce an outcome that appears intelligent. Such processes do not need to be ...
