Mineral Identification Guide - Mining Matters

Geologists use physical properties to identify minerals. For example, the (16) of a mineral is caused by the presence of different trace elements. The way a mineral reflects light from its surface is called (17), which is described as metallic or nonmetallic.

Name Class Date CHAPTER 4 Minerals

A mineral, by definition, must meet four criteria. It must: be a naturally occurring substance, be a solid substance, have an internal crystal structure and have been formed by inorganic processes (in other words, it cannot be formed by an organism). A rock, by comparison, is composed of one or more minerals or organic material (such as coal).
